Random Delay in Network Coding for Bidirectional Relaying

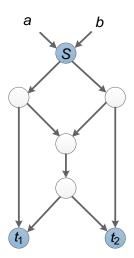

Niv Voskoboynik, Haim Permuter and Asaf Cohen

Ben Gurion University

June, 2014

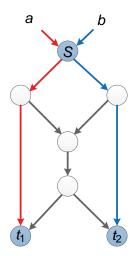

What is Network Coding?

Butterfly network

What is Network Coding?

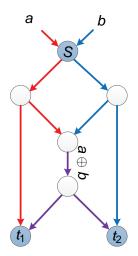

Using simple routing:

< A

What is Network Coding?

Using Network Coding:

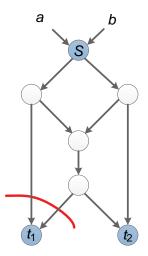

BGU-ECE

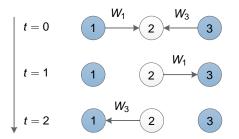

Max-Flow Min-Cut Theorem

The maximum value of a flow is equal to the minimum cut

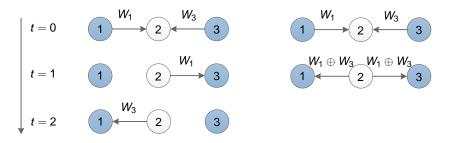

(R.Ahlswede et al. 2000)

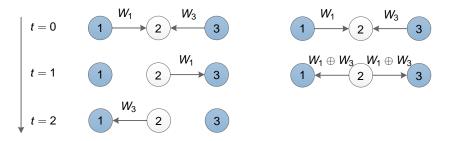

(I) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1)) < ((1))

• Decoding: $(W_1 \oplus W_3) \oplus W_3 = W_1$

Motivation - Random Delay

Challenge: Random delay

• At time *t*: Node 2 has $W_1(t - d_1^t)$ and $W_3(t - d_3^t)$, where $d_1^t, d_3^t \sim unif(1, 2, ..., D)$

A (1) > A (2) > A

Motivation - Random Delay

Challenge: Random delay

• At time t: Node 2 has $W_1(t - d_1^t)$ and $W_3(t - d_3^t)$, where $d_1^t, d_3^t \sim unif(1, 2, ..., D)$

Problem: How to decode?

• With which message to XOR with?

Motivation - Random Delay

Challenge: Random delay

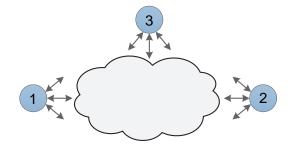

• At time t: Node 2 has $W_1(t - d_1^t)$ and $W_3(t - d_3^t)$, where $d_1^t, d_3^t \sim unif(1, 2, ..., D)$

Problem: How to decode?

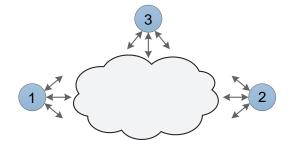

- With which message to XOR with?
- Which message is decoded?

Find a coding scheme for a bidirectional graph with random delay

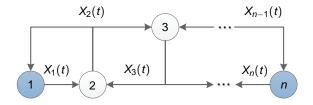

Find a coding scheme for a bidirectional graph with random delay

Approach: Use building blocks

One generalization of the first example is a line topology (Y.Wu *et al.* 2004)

• Assuming $d_1^t, d_n^t = 1, \forall t$

- Assuming $d_1^t, d_n^t = 1, \forall t$
- Node r transmits:

$$X_r(t) = W_1(t - (r - 1)) + W_n(t - (n - r))$$

A (1) > A (2) > A

- Assuming $d_1^t, d_n^t = 1, \forall t$
- Node r transmits:

$$X_r(t) = W_1(t - (r - 1)) + W_n(t - (n - r))$$
$$X_1(t) = W_1(t) + W_n(t - (n - 1))$$

• • • • • • • • • • • •

- Assuming $d_1^t, d_n^t = 1, \forall t$
- Node r transmits:

$$X_r(t) = W_1(t - (r - 1)) + W_n(t - (n - r))$$

$$X_1(t) = W_1(t) + W_n(t - (n - 1))$$

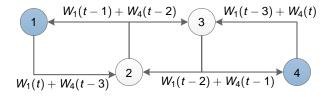

Generated by

$$X_r(t) = X_{r+1}(t-1) + X_{r-1}(t-1) + X_r(t-2)$$

- E 🕨

Example

A line topology with four nodes

< A > < > >

A generalization to random delay

$$X_r(t) = W_1(p) + W_n(q)$$

Summary

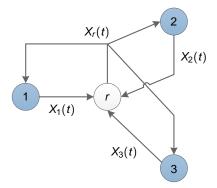

• A coding scheme for a line topology with rate of 1

Summary

- A coding scheme for a line topology with rate of 1
- A first building block for a general topology

Building Block 2 - Star Topology

A star topology with three source nodes

< 17 ▶

Node r transmits:

$$X_r(t) = a_1 W_1(t-1) + a_2 W_2(t-1) + a_3 W_3(t-1)$$

Summary

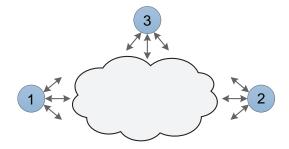

• A coding scheme for a star topology with rate of 0.5

Summary

- A coding scheme for a star topology with rate of 0.5
- A combination is called a line-star topology

• We define a bidirectional graph $\mathcal{G}(\mathcal{V}, \mathcal{E})$

Wired Model

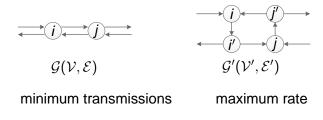

• We construct an equivalent graph $\mathcal{G}'(\mathcal{V}', \mathcal{E}')$

3 ×

Wired Model

• We construct an equivalent graph $\mathcal{G}'(\mathcal{V}', \mathcal{E}')$

General Topology

Upper Bound

• $C_{i,j}$ is the value of the cut-set bound between *i* and *j*

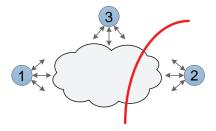

4 A N

→ ∃ →

General Topology

Upper Bound

- *C_{i,j}* is the value of the cut-set bound between *i* and *j*
- $h = \min_{i \in S} C_{i,S \setminus \{i\}}$

General Topology

• *R_i* is the transmission rate of node *i*

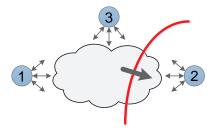

- **→** - **→** -

- R_i is the transmission rate of node i
- Assumption: all rates are equal $(R_i = R, \forall i \in S)$

4 A N

∃ >

- R_i is the transmission rate of node i
- Assumption: all rates are equal ($R_i = R, \forall i \in S$)
- Upper bound: $R \leq \frac{h}{2}$

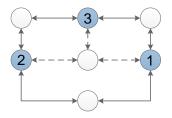

Coding Scheme

• Partition each network \mathcal{G}' into line and star networks

< A > < > >

Coding Scheme

- Partition each network G' into line and star networks
- \mathcal{R} represents the line topologies
- Q represents the star topologies

Lemma

There exist \mathcal{R} and \mathcal{Q} such that $|\mathcal{R}| + \frac{|\mathcal{Q}|}{2} \geq \frac{h}{2}$

(N.Voskoboynik et al. 2014)

イロト イ団ト イヨト イヨト

• Element in Q:

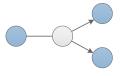

Lemma

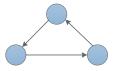

There exist \mathcal{R} and \mathcal{Q} such that $|\mathcal{R}| + \frac{|\mathcal{Q}|}{2} \geq \frac{h}{2}$

(N.Voskoboynik et al. 2014)

• Element in Q:

• Element in R:

• Find \mathcal{R}

∃ >

- Find \mathcal{R}
- At each line use the coding scheme from building block 1

< A >

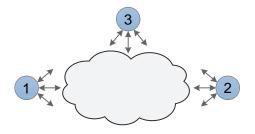

- Find \mathcal{R}
- At each line use the coding scheme from building block 1
- Find Q

∃ >

- Find \mathcal{R}
- At each line use the coding scheme from building block 1
- Find Q
- At each star use the coding scheme from building block 2

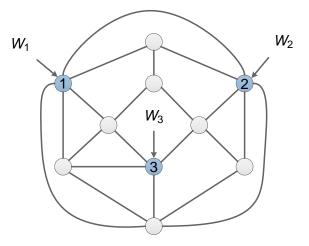

Summary

• Using line and star topologies, we construct a coding scheme for a general topology

Example 1

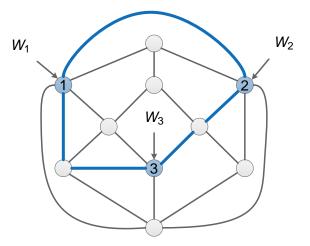

h = 4 and therefore, the upper bound is 2

イロト イ理ト イヨト イヨ

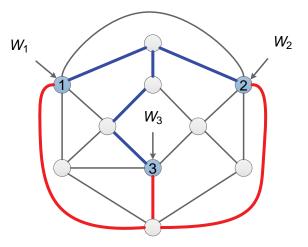

Example 1

The set \mathcal{R} includes one ring, i.e., $|\mathcal{R}| = 1$

Example 1

The set \mathcal{Q} includes two star networks, i.e., $|\mathcal{Q}| = 2$

イロト イ理ト イヨト イヨ

Maximum values of $|\mathcal{R}|$ and $|\mathcal{Q}|$ in a graph $\mathcal{G}(\mathcal{V},\mathcal{E})$

Maximum value	General graph	Complete graph
$ \mathcal{R} $	$\lfloor \frac{ \mathcal{V} }{3} \rfloor$	1
$ \mathcal{Q} $	$ \mathcal{V} -2$	$ \mathcal{V} -3$

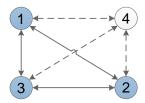

Figure: Complete graph
